Interview Questions for Construction Manager

Context & current process

How is PPE compliance currently monitored on site — manual walkthroughs, spot checks, self-reporting?

Ans- through all of the above

How often do violations occur, and which types are most common (no hardhat, no mask, no harness, falls)?

Ans- violations are usually hardhats and falls arrestor

Who is responsible for enforcement, and what happens after a violation is spotted today?

Ans- security personnel are responsible for enforcement while safety officers are responsible for reporting and review

How is incident/violation data currently recorded — paper, spreadsheet, existing software?

Ans- it's been recorded through software and paper

Pain points

5. What's the biggest gap in current safety monitoring (coverage, speed of response, evidence for incidents)?

Ans- coverage

6. Have there been incidents that a monitoring system might have caught earlier?

Ans- yes

7. How much time does safety compliance reporting currently take per week?

Ans- period of 0-7hrs

Functional needs

8. Which zones or activities need the highest-priority monitoring (e.g. scaffolding, machinery areas)?

Ans- machinery

9. Who should receive alerts when a violation is detected — site supervisor, safety officer, all of the above?

Ans- safety officer on site

10. How fast does a response need to be after a violation (real-time, within minutes, daily review)?

Ans- real time

11. Do you need historical trends/reporting (e.g. weekly violation dashboards) or just live alerts?

Ans- historical trends are needed

12. Should the system escalate repeat offenders or repeat-violation zones differently?

Ans- repeat violation zones

Non-functional / constraints

13. How many cameras/feeds would a real deployment need to cover?

Ans- in site of over a hectare, 10 cameras

14. What's an acceptable false-positive rate before alerts become "noise" people ignore?

Ans- one

15. Any concerns about worker privacy or data retention around video monitoring?

Ans- concerns are usually been dealt with through customer or employee privacy data protection policy

16. What existing systems (if any) would this need to integrate with — access control, HR, incident logs?

Ans- Hr

17. Budget or infrastructure constraints (on-prem vs cloud, existing camera hardware)?

Ans- infrastructure

Success criteria

18. What would make this tool something you'd actually trust and use daily?

Ans- it's easy to navigate and use

19. How would you measure whether it's working (fewer incidents, faster response, better audit trail)?

Ans- more incidents been reported, faster response, better audit and ease with use
